# SLANZI HYDRAULIC TRAILER BRAKE VALVE

According to new EU regulation for agricultural and forestry vehicles

## APPLICATION

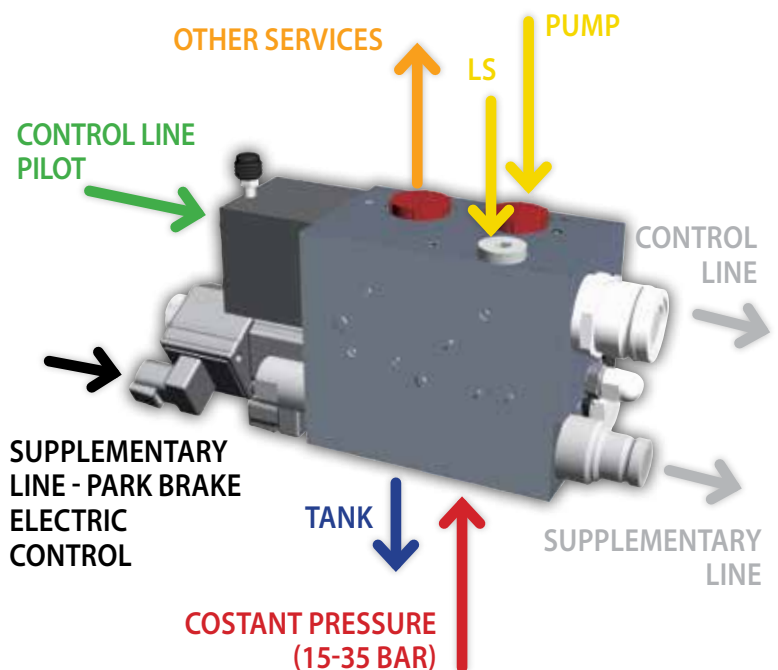

**PATENT  
PENDING**

## MAIN FEATURES

- Automatic zeroing of the secondary line in case of rupture or loss in the control line.
- Space optimization and compact design.
- Automatic valve cut-off in case of disconnected control line.
- System capable to automatically recognize the type of connected trailer (single or double line) and to self-adjust the braking performances (available in the version with integrated couplings).
- Available valve version with remoted couplings.
- Valve available for open or LS circuit.
- Safety system: in case of malfunction of electronic control transmission, not apply the brake contrary to the driver's intention.
