VALVOLE PER SISTEMI DI FRENATURA IDRAULICI
VALVES FOR HYDRAULIC BRAKING SYSTEMS

INDICAZIONI GENERALI

I nostri prodotti sono studiati e realizzati per soddisfare il più possibile le esigenze del singolo cliente e le richieste del mercato, sia in ambito mobile che in ambito industriale. Per un corretto impiego dei nostri prodotti e per garantirne l'affidabilità nel tempo, si consiglia di seguire quanto prescritto in questo catalogo.

Per un utilizzo diverso da quanto indicato, contattare il nostro personale tecnico.

FLUIDI IDRAULICI

Si raccomanda l'utilizzo di oli a base minerale con caratteristiche e proprietà chimico fisiche adatte all'utilizzo in apparecchiature e sistemi oleodinamici. Ad esempio:

- OLI A BASE MINERALE tipo HL (DIN 51524 parte 1)
- OLI A BASE MINERALE tipo HLP (DIN 51524 parte 2)

Per l'utilizzo di fluidi a base acquosa, di tipo ecologico, vegetali o altro, contattare il nostro personale tecnico.

TEMPERATURA D'ESERCIZIO E GUARNIZIONI

Le nostre valvole sono progettate per funzionare con temperature di esercizio dei fluidi comprese tra -20°C e +80°C. La massima temperatura ambiente per le elettrovalvole per uso continuo è di 60°C.

Per utilizzi delle nostre valvole in condizioni di temperatura diverse, contattare il nostro personale tecnico.

FILTRAZIONE

I nostri prodotti sono costruiti con componenti lavorati ad alta precisione e accoppiati con tolleranze precise. Pertanto le principali cause di malfunzionamento sono la presenza di particelle dure, che contaminano i fluidi.

La filtrazione raccomandata negli impianti ove vengano alloggiato le nostre valvole deve attenersi ai seguenti valori:

PRESSIONI DI LAVORO	FILTRAZIONE NOMINALE	CLASSE DI CONTAMINAZIONE
Per valvole funzionanti ad una pressione pari o superiore a 250 bar; per valvole proporzionali	7µm	ISO 4406: 18/16/13 NAS 1638 7
Per valvole funzionanti ad una pressione fino a 250 bar; spool and poppet valves	10µm	ISO 4406: 19/17/14 NAS 1638 8

VISCOSITÀ

Le classi di viscosità vengono descritte in base agli standard ISO DIN e i valori sono espressi in ISO-VG ed indicano la viscosità media del fluido a 40°C (mm²/s o centistokes cSt).

Per un corretto funzionamento si raccomanda di rimanere in un intervallo di viscosità compreso tra i 15 cSt e 250 cSt.

SETTAGGIO VALVOLE

La taratura delle valvole di ritegno, massima pressione e riduttrici di pressione, detta pressione di apertura, viene fatta ad una portata di 4 l/min. Per valori diversi da quelli indicati o tarature personalizzate, contattare il nostro personale tecnico.

CURVE CARATTERISTICHE

I diagrammi e le specifiche tecniche riportate in questo catalogo sono ottenute da prove con olio a base minerale, avente un grado di viscosità di 32 cSt ad una temperatura di 40°C, con un grado di filtrazione dell'impianto conforme alle norme ISO 4406 18/16/13 grado NAS 1638 7.

BOBINE

Le nostre bobine sono ED 100% per un intervallo di temperatura ambiente compreso tra -20°C e +40°C, rispettando tassativamente i valori di tensione nominale. Inoltre si raccomanda di posizionare le bobine in una zona ventilata.

Tutte le nostre bobine sono costruite con filo in rame in classe H mentre l'incapsulamento può essere in classe H (fino a 180°C) o in classe F (155°C).

Il grado di protezione IP ottenibile con un connettore EN 175301-803 (ex DIN 43650) è 65. È fondamentale montare correttamente la guarnizione tra connettore e bobina per mantenere nel tempo tale valore.

La variazione di tensione ammissibile, senza creare particolari problemi di funzionamento, è ± 10% del valore nominale indicato.

Tutte le nostre elettrovalvole sono progettate per funzionare esclusivamente con corrente continua (DC). È possibile lavorare in corrente alternata (AC) utilizzando un connettore EN 175301-803 (ex DIN 43650) con raddrizzatore.

GENERAL

Our products are designed and manufactured to meet as much as possible the requirements of the individual customer and market demands, both in the mobile sector which in industrial field.

For correctly use of our products and to ensure their long-term reliability, it is advisable to follow the requirements of this catalog. For any different use as specified, please consult our technicians.

HYDRAULIC OILS

We recommend the use of mineral-based oil with physical chemical characteristics and properties suitable for hydraulic and equipment system. For example:

- MINERAL BASED OIL like HL (DIN 51524 part 1)
- MINERAL BASED OIL like HLP (DIN 51524 part2)

For the use of water-based fluids, environmentally friendly fluids, plant or other fluids, please consult our technicians.

TEMPERATURE RATING AND SEALING

Our valves are designed to operate with fluid temperature from -20° C to +80° C. Solenoid valve are rated for 60°C maximum ambient temperature for continuous duty.

Consult our technicians for different condition of temperature.

FILTRATION

Our products are manufactured with high-precision machined components and coupled with exact tolerances. The main causes of malfunction are the presence of hard particles which contaminate the fluids. In plants where the valves are housed our recommended filtration system must comply with the following values:

TYPE OF SYSTEM	ABSOLUTE FILTRATION	CLEANLINESS CLASS RECOMMENDED
valves operating at pressure equal or higher than 250 bar; proportional valves	7µm	ISO 4406: 18/16/13 NAS 1638 7
Valves operating at pressure until 250 bar;	10µm	ISO 4406: 19/17/14 NAS 1638 8

FLUID VISCOSITY

The viscosity classes are described according to ISO DIN standard and the values are expressed in ISO-VG, indicating the average viscosity of the fluid at + 40°C (mm²/s or centistokes cSt).

For the correct operation we recommend to remain in a range of viscosity between 15 cSt and 250 cSt.

SETTING

Pressure settings for check, relief and reducing valves, referred to as CRACK PRESSURE, are set at a flow rate of 4 l/min.

For any different details as specified or different pressure settings, please consult our technicians.

TECHNICAL DETAILS

The diagrams and specifications in this catalog are obtained from tests with mineral-based oil having a viscosity of 32 cSt at a temperature of 40°C, with a filtration system conforming to ISO 4406 18/16/13 NAS 1638 7.

COILS

Our coils are rated for ED 100% provided that the room temperature remain from -20°C to +40°C, observing the values of the nominal voltage. It is also recommended to place the coils in a natural ventilated area. All our coils are constructed with copper wire class H, while the encapsulation may be in class H (180°C) or class F (155°C). All coils with EN 175301-803 (ex DIN 43650) connector correctly mounted comply with IP65 protection class. It is essential to properly set the seal between connector and coil to maintain the value over time. The voltage variation acceptable, without causing any particular problems of operation is ± 10% of the nominal value indicated.

All our solenoid valves are designed to operate correctly with direct power supply (DC). AC operation is possible using EN 175301-803 (ex DIN 43650) connectors with rectifier.

Il contenuto del presente catalogo può essere oggetto di variazioni o modifiche che la Slanzi Oleodinamica si riserva di apportare senza alcun obbligo di informazione.

I prodotti presentati, così come i dati tecnici e le specifiche tecniche, devono essere esaminati e controllati, in relazione all'uso a cui il prodotto è destinato, da personale competente con adeguate conoscenze tecniche. Occorre valutare le condizioni di funzionamento di ciascun prodotto in relazione all'applicazione che dello stesso si intende fare ed assicurarsi che durante l'utilizzo, tutte le condizioni relative alla sicurezza delle persone e/o delle cose siano rispettate.

The content of this catalogue can be subject to variations or modifications that Slanzi Oleodinamica has the right to make without any obligation of notification.

The presented products, as well as the technical data and technical specifications, must be examined and checked by competent staff with adequate technical knowledge, in relation to the use to which the product is destined.

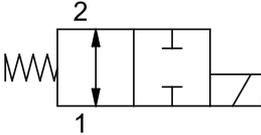

It is necessary to consider the working condition of every product in relation to the application for which it is used, making sure during the use, to respect all the conditions related to the safety of persons and/or things.

PRESTAZIONI / PERFORMANCE

Limiti di impiego/Limits of appl.

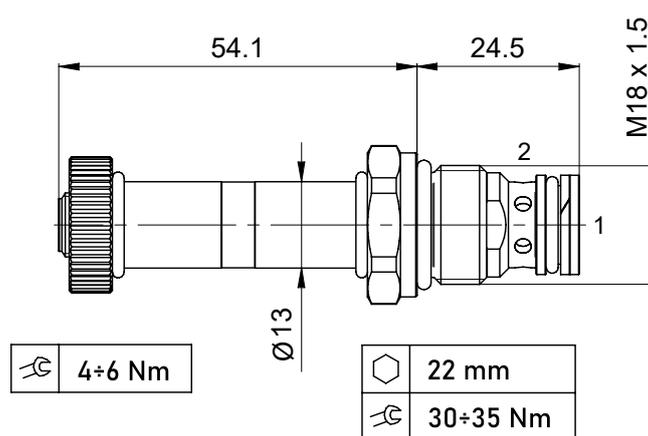

Perdite di carico/Pressure drop

Olio idraulico minerale 32 cSt – temp. 40 °C [104 °F]
Hydraulic mineral Oil 32 cSt – temp. 40 °C [104 °F]

SPECIFICHE / SPECIFICATION

Cavità Cavity	C 7814 - 2
Pressione max. Max. Op. pressure	350 bar
Portata max. Max Flow	60 l/min
Trafilamento interno Internal Leakage	0,25 cm ³ /min alla max. pressione di esercizio con olio 32 cSt 0,25 cm ³ /min at maximum operating pressure with 32 cSt oil
Blocchetti Standard Standard Manifolds	Cap. 8
Bobine Coils	Cap. 6 - Size 09

DIMENSIONI / DIMENSIONS

INFORMAZIONI PER L'ORDINE / ORDERING INFORMATION

DESCRIZIONE / DESCRIPTION

Elettrovalvola a cartuccia 2 vie 2 posizioni a tenuta, pilotata, normalmente aperta. A magnete diseccitato permette il flusso bidirezionale.
2 way 2 position poppet type, solenoid operated cartridge valve, normally open. When de-energized, allow bidirectional flow.

Perdite di carico/Pressure drop

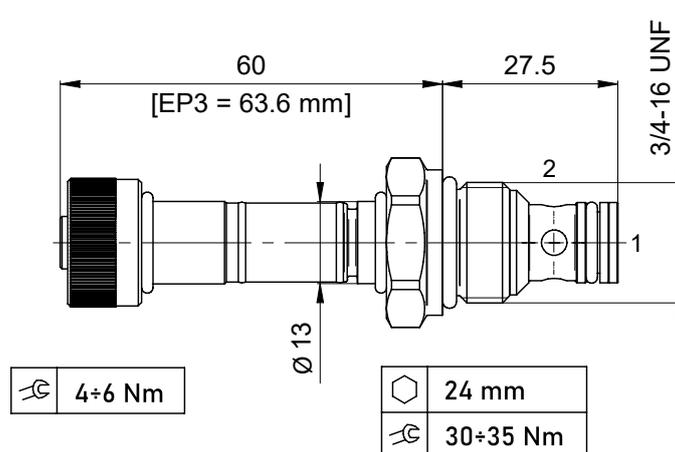

Olio idraulico minerale 32 cSt – temp. 40 °C [104 °F]
Hydraulic mineral Oil 32 cSt – temp. 40 °C [104 °F]

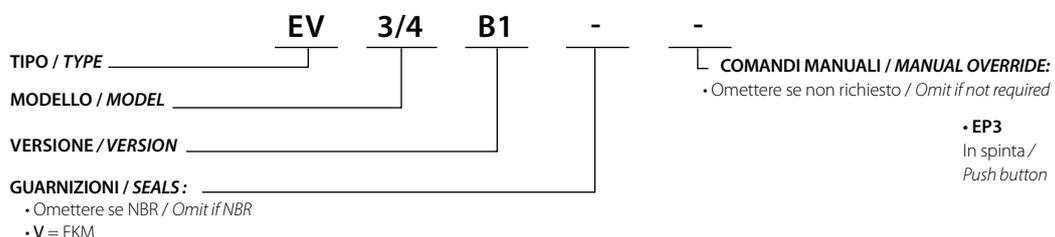

SPECIFICHE / SPECIFICATION

Cavità Cavity	C 2215 - 3
Pressione max. Max. Op. pressure	310 bar
Portata max. Max Flow	35 l/min
Trafilamento interno Internal Leakage	Max. 50 cm ³ /min a 310 bar con Oil 32 cSt
Blocchetti Standard Standard Manifolds	Cap. 8
Bobine Coils	Cap. 6 - Size 09

DIMENSIONI / DIMENSIONS

INFORMAZIONI PER L'ORDINE / ORDERING INFORMATION

DESCRIZIONE / DESCRIPTION

Elettrovalvola a cartuccia 3 vie 2 posizioni a cursore, azionamento diretto.
3 way 2 position spool type, solenoid operated cartridge valves, direct acting.

TIPO / TYPE

EV7/8 32A3

SIMBOLO / SYMBOL

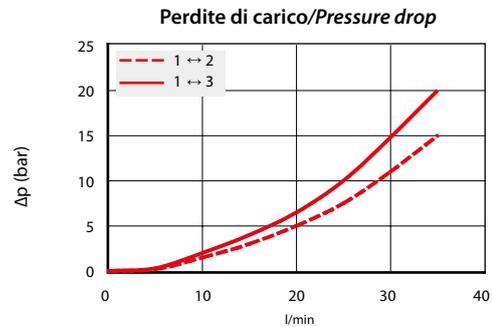

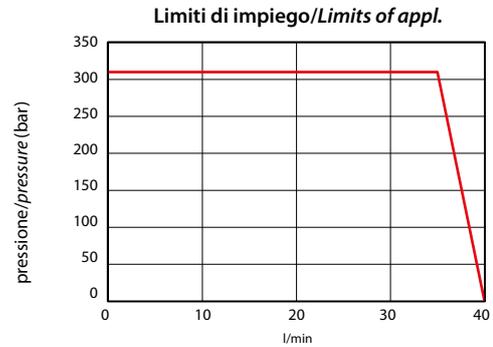

SPECIFICHE / SPECIFICATION

Cavità Cavity	C 7814 - 3
Pressione max. Max. Op. pressure	310 bar
Portata max. Max Flow	35 l/min
Trafilamento interno Internal Leakage	Max. 50 cm ³ /min a 310 bar con Oil 32 cSt
Blocchetti Standard Standard Manifolds	Cap. 8
Bobine Coils	Cap. 6 - Size 09

GRANDEZZA / SIZE

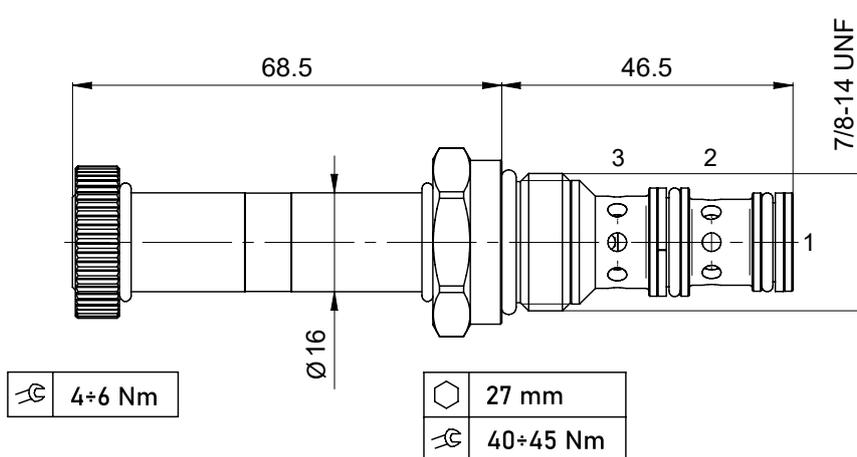

SAE 10

PRESTAZIONI / PERFORMANCE

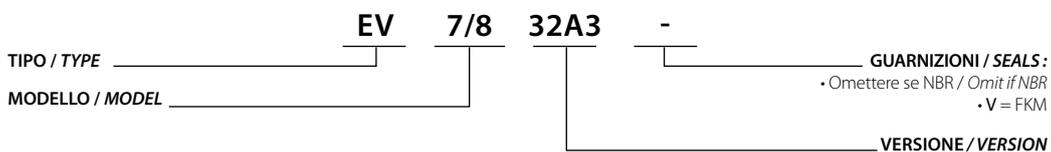

Olio idraulico minerale 32 cSt – temp. 40 °C [104 °F]
Hydraulic mineral Oil 32 cSt – temp. 40 °C [104 °F]

DIMENSIONI / DIMENSIONS

INFORMAZIONI PER L'ORDINE / ORDERING INFORMATION

Hydraulic mineral Oil 32 cSt – temp. 40 °C [104 °F]

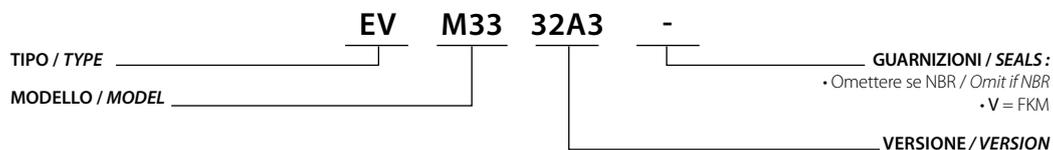

SPECIFICHE / SPECIFICATION

Cavità Cavity	C 2215 - 4
Pressione max. Max. Op. pressure	310 bar
Portata max. Max Flow	35 l/min
Trafilamento interno Internal Leakage	Max. 50 cm ³ /min a 310 bar con Oil 32 cSt
Blocchetti Standard Standard Manifolds	Cap. 8
Bobine Coils	Cap. 6 - Size 09

DIMENSIONI / DIMENSIONS

INFORMAZIONI PER L'ORDINE / ORDERING INFORMATION

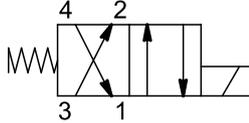

DESCRIZIONE / DESCRIPTION

Elettrovalvola a cartuccia 4 vie 2 posizioni a cursore, azionamento diretto.
4 way 2 position spool type, solenoid operated cartridge valves, direct acting.

TIPO / TYPE

EVM18 42F5

SIMBOLO / SYMBOL

SPECIFICHE / SPECIFICATION

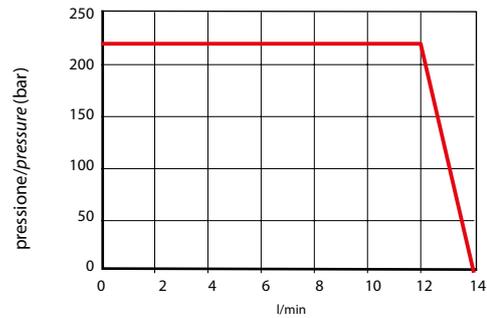

Cavità Cavity	C 1815 - 4
Pressione max. Max. Op. pressure	220 bar
Portata max. Max Flow	12 l/min
Trafilamento interno Internal Leakage	Max. 40 cm ³ /min a 220 bar con Oil 32 cSt
Blocchetti Standard Standard Manifolds	Cap. 8
Bobine Coils	Cap. 6 - Size 06

GRANDEZZA / SIZE

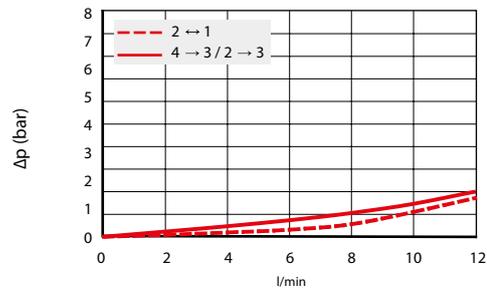

M18

PRESTAZIONI / PERFORMANCE

Limiti di impiego/Limits of appl.

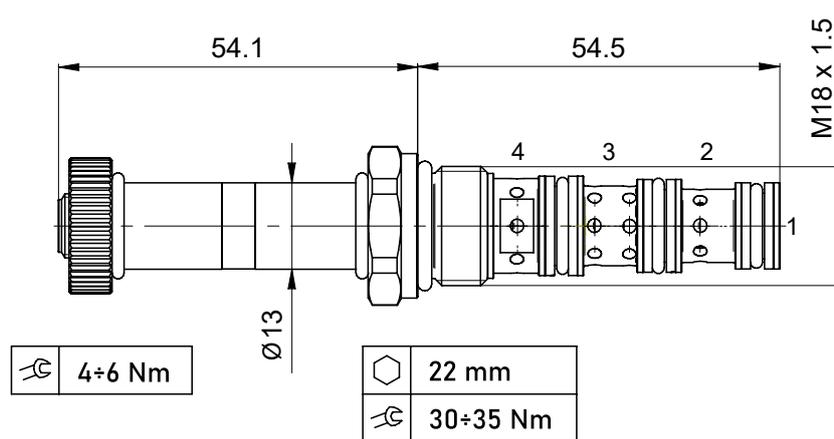

Perdite di carico/Pressure drop

Olio idraulico minerale 32 cSt - temp. 40 °C [104 °F]
Hydraulic mineral Oil 32 cSt - temp. 40 °C [104 °F]

DIMENSIONI / DIMENSIONS

INFORMAZIONI PER L'ORDINE / ORDERING INFORMATION

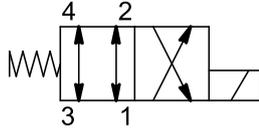

DESCRIZIONE / DESCRIPTION

Elettrovalvola a cartuccia 4 vie 2 posizioni a cursore, azionamento diretto.
4 way 2 position spool type, solenoid operated cartridge valves, direct acting.

TIPO / TYPE

EV7/8 42F11

DESCRIZIONE / DESCRIPTION

La valvola prioritaria blocca il flusso da P verso T fino a quando la pressione non raggiunge la taratura impostata, sollevando la sfera dalla sua sede: questa azione drena l'olio verso lo scarico da P verso T attraverso il pistoncino principale. Quando la pressione sulla linea X supera il valore della taratura della valvola, un piccolo pistoncino pilota mantiene la sfera sollevata, garantendo che l'olio vada a scarico da P verso T con bassissime perdite di carico. La camera della molla drena a scarico tramite la porta Y.

Priority unloading valve blocking the flow from P to T until pressure reaches the set value, lifting the ball from its seat: this action exhausts oil above the main-stage spool unloading it from P through T. When remote pilot pressure at X exceeds the pressure setting, a small piston keeps the pilot-stage ball lifted up, again unloading oil from P through T with minimal pressure drop. Spring chamber is drained to tank through port Y.

▲ ISTRUZIONI DI REGOLAZIONE / TECHNICAL INFORMATION

Dopo avere connesso il sistema, si verifichi che il cilindro comandato idraulicamente si muova muovendo il potenziometro o azionando lo switch. Azzerare i potenziometri **ramp up** e **ramp down** ruotandoli completamente in senso antiorario. Azzerare il potenziometro di comando esterno (o aprire l'interruttore) ed impostare la corrente minima tramite il potenziometro **offset**, ruotandolo fino a che dispositivo comandato comincia appena a muoversi: il sistema sarà così impostato in modo da muoversi senza ritardi. Azzerare il potenziometro **full load** e portare il potenziometro di controllo al massimo (o chiudere l'interruttore): ruotare il potenziometro **full load** fino a che il dispositivo comandato non raggiunge il massimo della sua corsa, poi diminuire il potenziometro **full load** fino a che il dispositivo comandato non arretra leggermente. Dopo avere così equilibrato i punti di inizio e fine corsa, procedere alla regolazione desiderata della velocità di passaggio tramite i comandi **ramp up** e **ramp down**, che non influiscono sulle regolazioni precedentemente impostate.

NOTE

L'alimentazione elettrica è compresa fra 12 e 30 V DC. È richiesta alimentazione con corrente raddrizzata e filtrata. Si consiglia l'uso di un condensatore di filtraggio di 4700 mF. Il regolatore è adatto al pilotaggio di elettrovalvole a 12 o 24 V DC. Per assicurare la corrente massima nominale di funzionamento dell'elettrovalvola è necessario che la tensione di alimentazione del regolatore sia almeno 1,5 V superiore alla tensione nominale di targa della elettrovalvola.

After connecting the system, verify that the hydraulically-driven cylinder moves either by moving the potentiometer or by using the switch.

*Set the **ramp up** and **ramp down** potentiometers to zero by turning them fully anti-clockwise.*

*Set the external control potentiometer to zero (or open the switch) and set the minimum current using the **offset** potentiometer, by turning it until the controlled device just starts to move: this way the system will be set to move without delay.*

*Set the **full load** potentiometers to zero and bring the control potentiometer to its maximum setting (or close the switch); turn the **full load** potentiometer until the controlled device reaches the end of its travel, then turn the **full load** potentiometer down until the controlled device moves back slightly.*

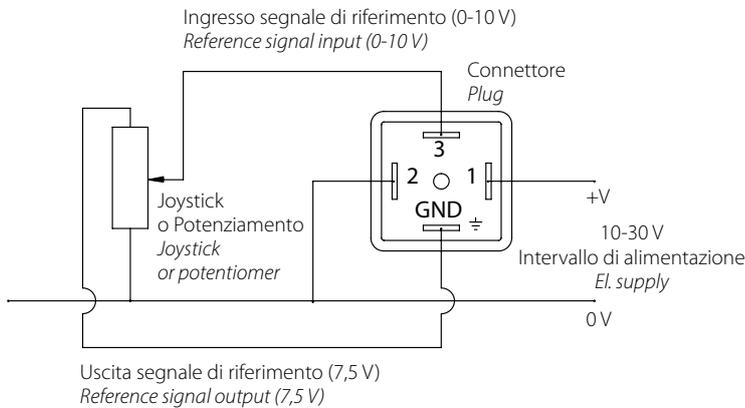

*After balancing the stroke start and end points in this way, adjust the ramp speed as required through the **ramp up** and **ramp down** controls, which do not affect the previously-set controls.*

NOTES

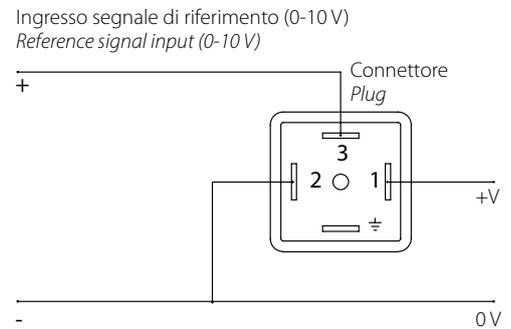

Electrical supply voltage ranges between 10 and 30 VDC. A power supply with rectified and filtered current is required. Use of a 4700 µF filter capacitor is recommended.

The regulator is suitable for driving 12 or 24 VDC solenoid valves. In order to ensure the solenoid valve's maximum rated operating current, the regulator's supply voltage must be at least 1.5 V higher than the solenoid valve's indicated voltage rating.

▲ CARATTERISTICHE GENERALI /

- PIN 1: VBatt - + v supply input
- PIN 2: GND Batt - o v supply input
- PIN 3: ingresso segnale di controllo - Reference signal input
- PIN GND: Massa segnale di controllo - Reference signal input

Controllore elettronico miniaturizzato incapsulato con connettori DIN 43650 - ISO 4400 per pilotaggio in anello aperto di elettrovalvole proporzionali. Protezione contro l'inversione della polarità di alimentazione e contro il corto-circuito della bobina. regolazione potenziometrica della corrente minima e massima, delle rampe di salita e discesa. LED di accensione.

Applicazioni

1 - Funzionamento on-off tramite switch e con utilizzo di rampe per accelerazione e decelerazione:

Connettere il Pin 3 ed il Pin GND all'interruttore (normalmente aperto). Alla chiusura dell'interruttore viene applicata la tensione massima al segnale di ingresso, portando la corrente della bobina al valore massimo. L'apertura dell'interruttore provoca la fine del passaggio della corrente nella bobina. I potenziometri **ramp up** e **ramp down** permettono di regolare, tramite rampe lineari, il tempo di passaggio rispettivamente dal minimo al massimo e dal massimo al minimo della corrente. Minimo e massimo valore della corrente sono regolabili rispettivamente tramite i potenziometri **offset** e **full load**.

2 - Controllo tramite sorgente di alimentazione esterna

Connettere il segnale di controllo al Pin 3 e la massa (0V) al Pin 2. La tensione di ingresso al Pin 3 può variare da 0 a 10V. La corrente di comando della elettrovalvola è proporzionale alla tensione di comando. Con la tensione di pilotaggio massima (10 V) regolare il potenziometro **full load** in modo da ottenere la corrente massima desiderata.

3 - Controllo tramite potenziometro

Connettere un'estremità del potenziometro al Pin GND e l'altra al Pin 2. Connettere il pin di uscita del potenziometro al Pin 3.

Portare il potenziometro sul massimo ed effettuare la regolazione del controllore come descritto in seguito.

Si consiglia l'uso di potenziometri di resistenza pari a 5KOhm. La resistenza del potenziometro dovrà comunque essere compresa fra 2KOhm e 10KOhm.

4 - Controllo a due assi tramite joystick

Questo controllo è realizzabile tramite un convertitore joystick a due assi e due connettori. Il joystick è connesso al convertitore, e così pure l'alimentazione. A sua volta il convertitore è connesso ai due connettori, controllandoli quindi direttamente.

Le correnti e le rampe dei due controllori sono sempre indipendenti. Raddoppiando il sistema è possibile realizzare un sistema a quattro assi.

EXTERNAL REFERENCE SIGNAL MODE

CONTROL BY WAY OF AN EXTERNAL POWER SOURCE

Connect the control signal to Pin 3 and the ground (0V) to Pin 2. The input voltage to Pin 3 can vary from 0 to 10 V. The solenoid valve's control current is proportional to the control voltage. With the maximum driving voltage (10 V), adjust the full load potentiometer so as to obtain the maximum required current.

JOYSTICK OR POTENTIOMETER MODE

CONTROL BY WAY OF A POTENTIOMETER

Connect one end of the potentiometer to the GND Pin and the other end to Pin 2.

Connect the potentiometer's output pin to Pin 3. Move the potentiometer to its maximum setting and adjust the controller as described below.

It is advisable to use potentiometers with a resistance of 5 kOhm. The potentiometer's resistance in any case be within the 2 kOhm and 10 kOhm range.

TWO AXIS CONTROL BY WAY OF A JOYSTICK

This type of control can be carried out using a two-axis joystick converter and two connectors. The joystick is connected to the converter, as is the power supply. In turn, the converter is connected to the two connectors, thus controlling them directly.

The currents and ramps of the two controllers are always independent. By doubling up the system, it is possible to set up a four axis system.

ORDINAZIONI

1) Gli ordini devono pervenire alla Slanzi Oleodinamica S.r.l.

Sempre in forma scritta e devono riportare: l'esatta ragione sociale, l'indirizzo dell'ordinante, numero d'ordine, data di emissione, riferimento eventuale offerta Slanzi Oleodinamica S.r.l., denominazione scrupolosa del o degli articoli ordinati, data di consegna richiesta, destinazione del materiale e vettore.

2) La Slanzi Oleodinamica S.r.l. si riserva la facoltà di eventualmente adeguare o di respingere l'ordinazione in forma scritta entro sette giorni del ricevimento.

3) Non sono da ritenersi impegnativi eventuali accordi verbali o scritti di qualsiasi genere presi dai nostri dipendenti o da agenti con il committente, se non sono seguiti da conferma scritta della Slanzi Oleodinamica S.r.l.

GARANZIA ED AVVERTENZE

1) La Slanzi Oleodinamica S.r.l. garantisce che i propri prodotti sono esenti da difetti di materiali o di costruzione, per un periodo di 12 mesi a decorrere dal giorno di spedizione dalla propria sede. La garanzia consiste nella riparazione o sostituzione, previo esame presso la sede della Slanzi Oleodinamica S.r.l. dei prodotti o parti degli stessi inutilizzabili, per accertato difetto del materiale o di costruzione. Gli eventuali reclami dovranno pervenire in forma scritta presso la nostra sede. La Slanzi Oleodinamica S.r.l. si riserva il diritto di autorizzare la restituzione del materiale contestato; difetti di fabbrica visibili alla consegna dovranno essere segnalati in forma scritta entro 48 ore dal ricevimento della merce. Il prodotto si intende reso franco destino ad accertamento delle cause di necessaria riparazione o sostituzione.

2) Sono esclusi da garanzia i componenti del prodotto soggetti a più facile usura come ad esempio: molle, o-rings, guarnizioni in genere, ecc. . .

3) La garanzia non ha validità per i prodotti utilizzati ed installati in modo improprio, negligente per qualunque manomissione o per danni causati agli stessi dalle attrezzature utilizzatrici, in particolare modo la Slanzi Oleodinamica S.r.l. è esonerata da ogni obbligo per qualsiasi danno a persone o cose che possono verificarsi per o durante l'uso dei propri prodotti per causa od in dipendenza a quanto sopra.

4) La Slanzi Oleodinamica S.r.l. non risponde di eventuali danni causati al prodotto avvenuti durante il trasporto o la consegna, salvo preventivo accordo.

5) I componenti illustrati nel catalogo, sono concepiti per gestire la movimentazione del flusso di olio idraulico a base minerale, all'interno di appositi circuiti. La Slanzi Oleodinamica S.r.l. non risponde per alcun danno né a persone né a cose, imputabile ai propri prodotti per utilizzi e prestazioni diversi da quelli indicati e raccomandati sul proprio catalogo; utilizzi diversi devono essere espressamente autorizzati in forma scritta dalla Slanzi Oleodinamica S.r.l.

6) Tutti i prodotti Slanzi Oleodinamica S.r.l. devono essere preventivamente collaudati dal costruttore dell'impianto alle condizioni limite di funzionamento prima dell'utilizzo operativo dell'impianto stesso.

7) Essendo i prodotti Slanzi Oleodinamica S.r.l. realizzati con più meccanismi metallici di alta precisione d'accoppiamento, assemblati tra loro, ma con assoluto obbligo di restare tra loro indipendenti, per necessità funzionale di movimenti come scorrimento, rotazione, ecc., per di più corredati da guarnizioni di varie forme e mescole allo scopo di garantirne la perfetta ermeticità, ne consigliamo i lunghi periodi di inutilizzo, per il rischio di bloccaggio od incollaggio tra i vari componenti e del deperimento per inattività delle guarnizioni. In ragione di quanto detto sopra, la Slanzi Oleodinamica S.r.l. è sollevata da ogni responsabilità per qualsiasi danno causato dai propri prodotti non installati o comunque non utilizzati seppur installati su qualsiasi impianto entro 12 mesi dalla consegna. Tale clausola è estesa anche a quei prodotti che seppur utilizzati nel periodo di validità della garanzia, osservino nel corso della loro vita logico-operativa, altri periodi di inattività superiori a 6 mesi, per evitare i suddetti possibili inconvenienti; ne consigliamo la necessità di rendere tali prodotti alla Slanzi Oleodinamica S.r.l. a spese dell'acquirente per revisione.

8) La responsabilità finale della scelta e dell'utilizzo dei prodotti Slanzi Oleodinamica S.r.l., sono a carico dell'acquirente anche se suggeriti dalla organizzazione commerciale o tecnica della Slanzi Oleodinamica S.r.l., dal momento che le reali esigenze e condizioni di funzionamento delle apparecchiature dell'acquirente non sono integralmente riproducibili nei laboratori prova e collaudo della Slanzi Oleodinamica S.r.l.

GIURISDIZIONE

In caso di contestazione in cui la SLANZI OLEODINAMICA S.r.l. sia convenuta è esclusivamente competente il foro di Reggio Emilia.

ORDERS

1) Orders should always be placed with Slanzi Oleodinamica S.r.l. in writing: Orders should contain: full name and address of the customer, order number, date of issue, reference number of any Slanzi Oleodinamica S.r.l. quotation received, exact name of the item or items ordered, delivery date requested, destination of material and carrier.

2) Slanzi Oleodinamica S.r.l. reserves the right to alter if necessary or decline an order, subject to supplying written notice within 7 days of receipt of same.

3) Any form of written or verbal agreement entered into with the customer by our employees or agents shall not be considered binding unless followed by written confirmation of same on the part of Slanzi Oleodinamica S.r.l.

WARRANTY AND DIRECTIONS

1) Slanzi Oleodinamica S.r.l. guarantees its products free from material manufacturing defects for a period of 12 months with effect from date of shipment from its premises. The warranty covers repair and or replacement of product or parts of same that have proved to be unserviceable due to material or manufacturing defects following inspection at the premises of Slanzi Oleodinamica S.r.l. All claims should be forwarded in writing to our premises. Slanzi Oleodinamica S.r.l. reserves the right to authorise the return of the material that is the subject of complaint. Manufacturing defects apparent at the time of delivery should be reported in writing within 48 hours of receipt. The product is intended as being delivered free to consignee for investigation into the reasons as to the required repair or replacement.

2) Those components of the product subject to normal wear and tear are not covered by the terms of the warranty; e.g. springs, o-rings, gasket, etc.

3) The warranty does not cover products assembled in an improper or negligent manner, any kind of tampering or damage caused to same by other user equipment. In particular, Slanzi Oleodinamica S.r.l. is relieved of all liability for damages to persons or objects caused during or as a result of the improper use of its products as outlined above.

4) Unless otherwise agreed in advance, Slanzi Oleodinamica S.r.l. will accept no liability for damages to the product arising during shipment or delivery.

5) The components illustrated in the catalogue are designed to handle the flow of mineral-based hydraulic oil within special circuits. Slanzi Oleodinamica S.r.l. accepts no liability for damages to persons or objects as a result its products being put to uses or working conditions inconsistent with those indicated and recommended in its catalogue. Different uses are subject to the advance written authorisation of Slanzi Oleodinamica S.r.l.

6) All Slanzi Oleodinamica S.r.l. products must be tested and approved by the system manufacturer under maximum rated operating conditions before which system is brought into service.

7) Slanzi Oleodinamica S.r.l. products consist of an assembly of various highprecision metal coupling components. Whilst connected between them. It is essential that they remain independent from each other in order to carry out movements such as: sliding, rotation, etc. In addition, they are fitted with gaskets of various shape and composition. In order to ensure complete tightness, we do not recommend that the system be taken out of service for long periods so as to reduce a risk of seizure or jamming of various components or perishing of gaskets caused by lack of use. As regards such conditions and recommendations, Slanzi Oleodinamica S.r.l. declines all liability arising from damages caused by its products that are not installed or are installed but not

utilised in any system within 12 months of delivery. Such clause also refers to those products that whilst utilised within the term covered by tile warranty, are subjected during the course of their normal working life to other periods of inactivity exceeding 6 months. In order to prevent the occurrence of such problems, we recommend that said products be returned to Slanzi Oleodinamica S.r.l. for an overhaul at the customer's expense.

8) The ultimate responsibility for the choice and use of Slanzi Oleodinamica S.r.l. products rests with the purchaser even if acting upon suggestions received from the Slanzi Oleodinamica S.r.l. sales or engineering departments. It should be cleared that the actual needs and operating conditions of the purchaser's equipment cannot be simulated in an identical manner within the Slanzi Oleodinamica S.r.l. test laboratories.

JURISDICTION

Sole jurisdiction for the settlement of any disputes involving SLANZI OLEODINAMICA S.r.l. lies with the Law Court of Reggio Emilia, Italy.

Oltre ai prodotti presentati nel catalogo, il nostro personale tecnico è a disposizione per studiare e ricercare nuove soluzioni per soddisfare i bisogni specifici di ogni cliente.
